WHAT IS CLAIMED IS:

1	1.	A method for arranging medical information, the method
2.	comprising:	
3		binding a plurality of pages;
4		dividing the plurality of pages into a plurality of main
5	sections;	
6		associating a member with each of the main sections;
7		recording identification information for each member in the
8	main sections;	
9		dividing each main section into a plurality of subsections;
0		recording a plurality of medical events in a first subsection of
1	the plurality	of subsections, wherein each medical event includes a first
2	reference inc	dicia;
3	•	recording a plurality of dental events in a second subsection,
4	wherein each dental event includes a second reference indicia;	
5		recording a plurality of vision events in a third subsection,
6	wherein eac	h vision event includes a third reference indicia; and
7		recording a plurality of medication information entries in a
8	fourth subsection, wherein each medication information entry includes a	
9	linking indici	a corresponding to a reference indicia to link each medication
0	entry to one	of the medical event, the dental event or the vision event.

- 1 2. The method of Claim 1, wherein recording medical 2 information entries includes coupling a prescription label to the fourth 3 subsection.
- 3. The method of Claim 2, wherein coupling includes adhering the prescription label to the fourth subsection.

1	4. A medical information system comprising:		
2	a plurality of sections bound together, each section		
3	corresponding to a member of a group, each section including:		
4	a first subsection prompting recordation of a medical		
5	event;		
6	a second subsection prompting recordation of a dental		
7	event;		
8	a third subsection prompting recordation of a vision		
9	event; and		
0	a fourth subsection prompting recordation of		
1	medication information, wherein each of the first three subsections		
2	further prompts recordation of or includes a reference indicia and wherein		
3	the fourth subsection further prompts recordation of or includes a linking		
4	indicia corresponding to a reference indicia to link each medication		
5	information entry to one of the medical event, the dental event or the		
6	vision event.		
1	A medical information system comprising:		
2	a plurality of sections bound together, each section		
3	corresponding to a member of a group, each section including:		
4	a first subsection prompting recordation of a medical		
5	event;		
6	a second subsection prompting recordation of a dental		
7	event;		
8	a third subsection prompting recordation of a vision		
9	event; and		
0	a log found within a fourth subsection prompting		
1	recordation of information logging surgeries and/or hospitalizations,		
2	wherein each of the first three subsections further includes a reference		

Atty. Dkt. No.: 082454-0110

- indicia and wherein the log found within the fourth subsection further
- prompts recordation of or includes a linking indicia corresponding to a
- reference indicia to link each surgery and/or hospitalization entry to one of
- the medical event, the dental event or the vision event.
